LOOKS LIKE OAK - PERFORMS LIKE COMPOSITE

Timbex introduces a new approach to composite decking, combining the character and authenticity of natural timber with the performance and longevity demanded by modern outdoor living.

Developed in response to the growing influence of interior design on outdoor spaces, this innovative range is designed for those seeking to combine considered aesthetics with lasting performance.

The Beauty of Natural Timber – Reimagined

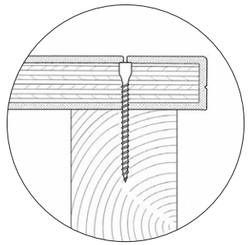
Manufactured from moulds taken from more than 20 carefully selected oak boards, every profile captures the texture, grain and subtle character that make real wood so desirable. Unlike conventional composite decking, each board features a non-repeating grain pattern, creating a rich and natural appearance with exceptional depth and variation. The result is a surface that looks and feels remarkably close to genuine timber, bringing warmth, texture and sophistication to any outdoor space.

NEW

SILVERED OAK
Timbex Composite
Decking

Beneath its authentic appearance is a highly engineered construction. A water-resistant FSC-certified solid-core profile, wrapped in a patented elastomer polyurethane surface layer, delivers durability while preserving the tactile qualities of natural wood.

The unique textured capping subtly conceals surface fixings, creating a clean, uninterrupted finish that appears virtually free of visible fixings once installed.



Timbex features a PU elastomer capping and lost-head screws, creating a clean, virtually fixing-free finish.

The Timbex palette is designed to complement both contemporary architecture and traditional outdoor spaces. From dramatic Black Oak to sun-washed Silvered Oak, each hue is carefully selected to enhance the natural grain and bring the board's rich, authentic texture to life.

Timbex Composite
Decking

NEW

Timbex solid boards deliver a premium hardwood look with the durability and low maintenance of composite. Capped with a woodgrain finish on three sides, they can be used as both decking and fascia boards. Wide boards span up to 600mm centres, reducing the supporting framework required, while the simple fixing system makes installation fast and easy.

BENEFITS OF TIMBEX® DECKING

- Natural-looking woodgrain finish
- Moulded from 20+ real oak boards
- Extra-wide 200mm robust board
- 600mm joist spans
- Patented PU elastomer capping with UV and stain resistance
- Lost-head screws for a clean finish
- Exceptional durability and longevity
- Low maintenance - no ongoing painting, staining or sealing
- FSC® certified
- 25 year warranty
