LOW MAINTENANCE

FAST, EASY INSTALL

Clarity® Charcoal Composite Fencing

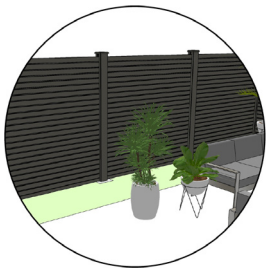

Ecoscape's range of composite fencing features an innovative modular WPC profile system, with boards that stack to achieve the desired height. This creates a bespoke, long-lasting, low-maintenance alternative to traditional timber fence panels.

Fence boards are available in three colours and can either be retrofitted between existing fence posts or used with our fully composite post system – the perfect way to transform any garden into a luxurious outdoor space.

This versatile system offers both flexibility and style while maintaining the same environmentally friendly ethos as our other composite ranges. It is manufactured using the same high-quality recycled HDPE plastic and reclaimed wood fibres.

APPLICATIONS

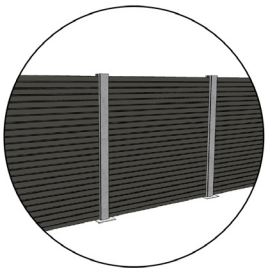

There are 3 main methods of installation for our composite fence boards.

1. Into ground or grass - with a concrete footing

2. Onto a concrete foundation or brick wall

3. Retrofit - into existing concrete posts

COLOURS

Charcoal

Graphite

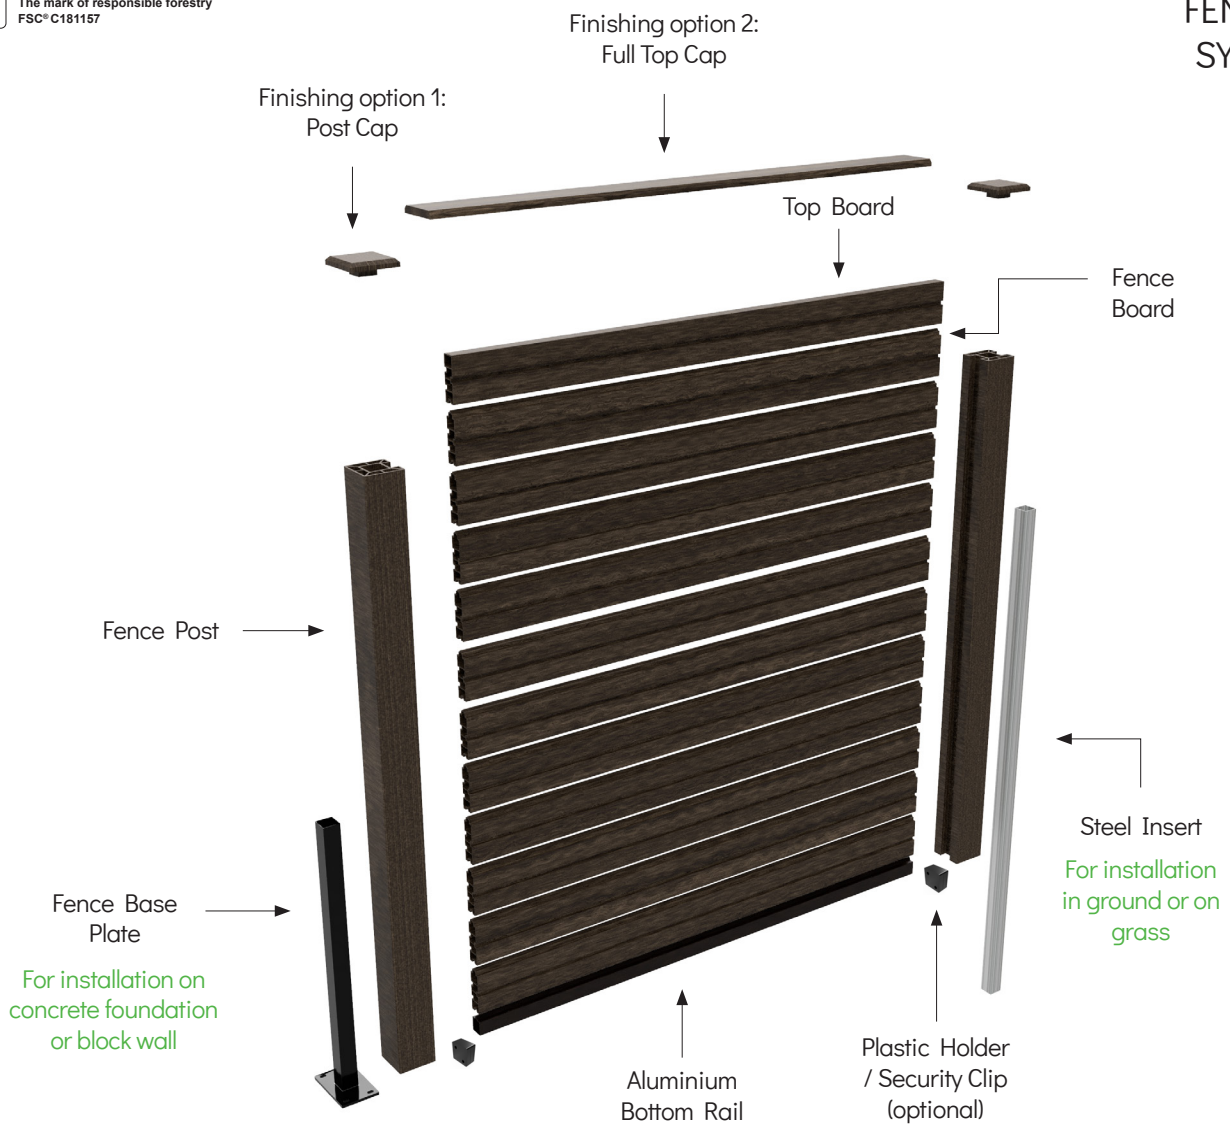

Walnut

Colour disclaimer: As with natural wood, the colours will change slightly in the first 3 months due to the UV exposure to the natural wood fibers, with lighter colours showing greater colour settling than darker colours.

All our composite products are FSC® certified.

MODULAR FENCING SYSTEM

The fence boards are 45mm x 157mm x 1830mm. Once installed, the face of the fence board is 150mm, making it easy to create UK standard height panels along with the 45mm colour coded aluminium bottom rail and 140mm composite top board. For example:

"4ft"/1235mm height fence* = 7 x fence boards + bottom rail + top board

"5ft"/1535mm height fence* = 9 x fence boards + bottom rail + top board

"6ft"/1835mm height fence* = 11 x fence boards + bottom rail + top board

The fence boards are 6ft/1830mm in length, giving customers the option to use in between existing posts. The profile is 45mm thick so no need to use wedges/packers (in most cases). The system also includes Post Caps or a Full Top Cap to finish off with and optional plastic holders for the aluminium bottom rail.

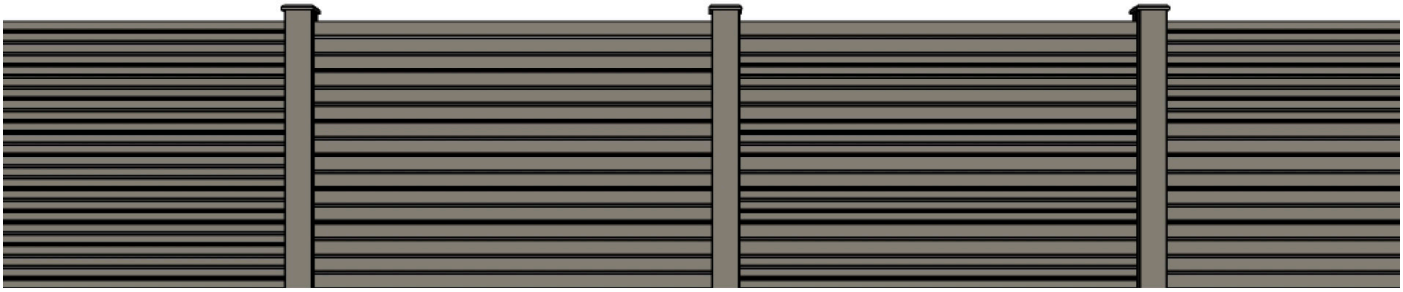

* Due to manufacturing tolerances all board and accessory dimensions are +/- 1.5mm meaning total fencing height may vary.

LAYING PATTERNS

The modular fence boards are dual-sided with 3 x 38mm battens on one side and 2 x 63mm battens on the other, allowing customers to create a unique pattern throughout. The low-maintenance boards are designed to simply slot on top of each other, held firmly in place by the range of composite posts and rails. Upgrading outdoor spaces couldn't be easier.
